DETAILED ACTION

1. An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

A listing of registered patent attorneys and agents is available on the USPTO Internet web site <http://www.uspto.gov> in the Site Index under "Attorney and Agent Roster." Applicants may also obtain a list of registered patent attorneys and agents located in their area by writing to the Mail Stop OED, Director of the U. S. Patent and Trademark Office, PO Box 1450, Alexandria, VA 22313-1450.

Claim Rejections - 35 USC § 102

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Martin.

Martin discloses a digital air pressure gauge and inflation device with features of the claimed invention including a tire gage transmitted signal-monitoring device that will fit on

existing design valve stems and is able to stay on the valve stem at all times even while feeding air into and into tire but can be removable as needed.

Regarding claim 3, Martin teaches a digital display screen (element 14) that will work with threaded valve stem adaptor (see, claim 3), and will screw onto existing valve stem.

4. Claim 2 is rejected under 35 U.S.C. 102(b) as being anticipated by Lemberger et al.. Lemberger et al., discloses a pressure gauge for vehicle tires with features of the claimed invention where an internal gage stick pops out indicating of pressure, and is capable of fitting any existing valve stems (col. 9, line 11-17).

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
